

AbangCebu AI — RBAC & Permission Verification Test Matrix

QA Specification for Role Boundaries, Supabase RLS, and Anti-Scam Lockout Protocols

Document ID:	AC-TEST-RBAC-001	Jira Ticket:	SCRUM-70
QA Engineer:	Anne KC M. Casinay	Reviewer / Lead:	Hermar Centillas
Release Date:	September 30, 2026	Lifecycle Status:	Approved & Audited

1. EXECUTIVE SUMMARY & VERIFICATION STRATEGY

The **AbangCebu AI Role-Based Access Control (RBAC) Test Verification Matrix** provides a rigorous QA test harness verifying that user access boundaries, data isolation, and anti-scam security policies are enforced across all 4 system roles: **Guest (Public Visitor)**, **Renter (Student / Worker)**, **Landlord (Host / Property Owner)**, and **Administrator (Trust & Safety Lead)**.

Triple-Firewall Defense Model: Every test case verifies that unauthorized access is blocked at three independent layers: Client Surface UI, Next.js Edge Middleware route guards, and the Supabase PostgreSQL Row Level Security (RLS) kernel.

2. ROLE TAXONOMY & PERMISSION MATRIX REFERENCE

Capability Domain	Guest	Renter	Landlord	Admin	Enforcement Policy
Public Map Exploration	Allowed	Allowed	Allowed	Allowed	properties_select_public_approved
View Unmasked Host Phone	Blocked	Allowed	Allowed	Allowed	Client mask + Auth gate
Save / Bookmark Rentals	Blocked	Allowed	Blocked	Allowed	saved_listings_renter_isolation
Submit Direct Inquiry / Tour	Blocked	Allowed	Blocked	Allowed	inquiries_insert_renter
Access Landlord Dashboard	Blocked (401)	Blocked (403)	Allowed	Allowed	Edge Middleware role assertion
Create / Publish Rental Listing	Blocked (401)	Blocked (403)	Allowed	Allowed	properties_insert_landlord
Edit Other Landlord's Listing	Blocked (401)	Blocked (403)	Blocked (0 rows)	Allowed	RLS: landlord_id = auth.uid()
Access Admin Dashboard (/admin)	Blocked (401)	Blocked (403)	Blocked (403)	Allowed	is_admin() SECURITY DEFINER
Approve / Reject Landlord KYC	Blocked	Blocked	Blocked	Allowed	kyc_verifications_admin_review
Emergency Account Freeze	Blocked	Blocked	Blocked	Allowed	profiles.is_suspended mutation

3. TEST SUITES: TEST CASES & EXECUTION MATRIX

Test Suite 1: Public Guest Access & Boundary Controls (TS-GUEST)

Test ID	Test Scenario	Execution Steps	Expected Security Outcome
TC-RBAC-001	Public Map Exploration Without Session	Navigate GET /, pan/zoom over CIT-U, USC, IT Park corridors.	HTTP 200 OK. Map tiles and approved listings render cleanly. Zero PII/contact numbers exposed.
TC-RBAC-002	Masked Host Contact Numbers	Navigate to listing detail page without session, click Contact.	Phone number displays masked (+63 917). Action triggers Auth Modal redirecting to /login.
TC-RBAC-003	Blocked Protected Dashboard Routes	GET /dashboard/renter, /dashboard/landlord, /admin.	Edge Middleware intercepts request. Returns HTTP 307 redirect to /login?next=<path>.
TC-RBAC-004	Direct REST Insertion Without Token	POST /rest/v1/inquiries with raw anon API key.	HTTP 401 Unauthorized / RLS violation. 0 rows inserted into public.inquiries.
TC-RBAC-005	Open Redirect Attack Defense	Navigate /login?next=https://evil-phishing.com.	Auth callback sanitizes parameter; redirects safely to internal /dashboard.

Test Suite 2: Renter Role Boundary Testing (TS-RENTER)

Test ID	Test Scenario	Execution Steps	Expected Security Outcome
TC-RBAC-006	Saved Listings Multi-Tenant Isolation	POST /api/saved-listings, query other user bookmarks.	Saved listings isolated strictly to own UUID via RLS policy auth.uid() = renter_id.
TC-RBAC-007	Submit Valid Inquiry to Landlord	POST /api/inquiries with tour date and note.	HTTP 201 Created. Inquiry created in pending state. Landlord receives unread count notification.
TC-RBAC-008	Blocked from Landlord Dashboard	GET /dashboard/landlord with active renter JWT.	HTTP 403 Forbidden. Access Restricted alert presented. Zero landlord operational metrics exposed.
TC-RBAC-009	Blocked from Listing Creation API	POST /api/properties with renter JWT.	HTTP 403 Forbidden (AUTH_ROLE_UNAUTHORIZED). RLS blocks insert into public.properties.
TC-RBAC-010	Blocked from Admin Console	GET /admin and /admin/kyc-queue.	HTTP 403 Forbidden. Next.js Edge Middleware enforces role === 'admin'.
TC-RBAC-011	Anti-Privilege Escalation on Profile	PATCH /rest/v1/profiles with {'role': 'admin'}.	PostgreSQL trigger blocks mutation. Role in database remains strictly 'renter'.

Test Suite 3: Landlord Listing Ownership & Isolation (TS-LANDLORD)

Test ID	Test Scenario	Execution Steps	Expected Security Outcome
TC-RBAC-012	Create Property Listing (Own Entity)	POST /api/properties with barangay, rent, coordinates.	HTTP 201 Created. landlord_id is automatically bound to auth.uid().
TC-RBAC-013	Update Own Property Rent & Vacancy	PATCH /api/properties/<own_id> with monthly_rent: 4200.	HTTP 200 OK. Listing details updated in database and audit logged.
TC-RBAC-014	Horizontal Privilege Escalation Attack	PATCH/DELETE /rest/v1/properties on other landlord listing.	RLS policy landlord_id = auth.uid() evaluates FALSE. 0 rows affected / HTTP 404.
TC-RBAC-015	Inquiry Inbox Multi-Tenant Isolation	GET /api/inquiries querying applicant dossiers.	Returns only inquiries matching landlord's owned units. Zero cross-landlord data leak.

Test ID	Test Scenario	Execution Steps	Expected Security Outcome
TC-RBAC-016	Blocked from Admin Console	GET /admin/kyc-queue with landlord JWT.	HTTP 403 Forbidden. Edge Middleware verifies is_admin() === false.
TC-RBAC-017	Submit KYC Government ID	Upload PhilSys ID to private storage bucket.	Storage policy permits write only to user UUID folder. Status initializes to 'pending'.
TC-RBAC-018	Blocked from Self-Approving KYC	PATCH /rest/v1/kyc_verifications with status: 'verified'.	RLS policy blocks update. Requires admin role. Status remains 'pending'.

Test Suite 4: Admin Role Authority & Audit Traceability (TS-ADMIN)

Test ID	Test Scenario	Execution Steps	Expected Security Outcome
TC-RBAC-019	Access Full KYC Queue	GET /admin/kyc-queue with admin session.	HTTP 200 OK. Returns 14 pending submissions with 15-minute presigned document URLs.
TC-RBAC-020	Approve Landlord KYC Submission	POST /api/admin/kyc/verify with decision: 'approve'.	HTTP 200 OK. status transitions to 'verified'. Landlord granted verified badge. Audit logged.
TC-RBAC-021	Mandatory Reason on KYC Rejection	POST /api/admin/kyc/verify with decision: 'reject' and reason.	Empty reason yields HTTP 422. Valid reason transitions to 'rejected' with guidance note.
TC-RBAC-022	Scam Moderation & Account Suspension	POST /api/admin/moderation/suspend-listing.	Listing status set to 'archived'. Landlord profiles.is_suspended toggled to TRUE.
TC-RBAC-023	Read Access to Forensic Audit Logs	GET /api/admin/audit-logs?limit=50.	HTTP 200 OK. Paginated audit events returned with actor UUID, action, and IP.
TC-RBAC-024	Immutability of Audit Ledger	DELETE /rest/v1/audit_logs on audit record.	HTTP 403 Forbidden. Database trigger blocks DELETE/UPDATE. Log is strictly append-only.

Test Suite 5: Anti-Scam Suspended Account Immediate Lockout (TS-LOCKOUT)

Test ID	Test Scenario	Execution Steps	Expected Security Outcome
TC-RBAC-025	Immediate Active Session Termination	Admin toggles is_suspended = TRUE on active scammer. Scammer sends GET /dashboard.	Edge Middleware checks is_suspended. Returns HTTP 403 Forbidden. Session cookies wiped.
TC-RBAC-026	Instant Public Search Listing Removal	Admin freezes landlord. Public visitor searches properties near CIT-U.	Public view excludes all listings where landlord.is_suspended = true. 0 scam listings shown.
TC-RBAC-027	Direct REST API Lockout	Suspended user sends POST /rest/v1/properties with existing token.	PostgreSQL RLS policy condition NOT (is_suspended) fails. Request rejected with HTTP 403.
TC-RBAC-028	Account Reinstatement Workflow	Admin reviews dispute, sets is_suspended = FALSE. User logs in.	User successfully authenticates and resumes normal dashboard operations.

4. TEST AUTOMATION SPECIFICATIONS (PLAYWRIGHT & VITEST)

```
// tests/e2e/rbac-route-guards.spec.ts — Playwright Automated Route Verification
import { test, expect } from '@playwright/test';

test.describe('RBAC Route Boundary Enforcement', () => {
  test('Guest redirected to /login when requesting protected routes', async ({ page }) => {
    await page.goto('/dashboard/renter');
    await expect(page).toHaveURL(/\/login\n?next=%2Fdashboard%2Frenter/);
  });

  test('Renter blocked from Landlord dashboard (/dashboard/landlord)', async ({ page, context }) => {
    await context.addCookies([{ name: 'sb-access-token', value: process.env.TEST_RENTER_JWT!, domain: 'localhost', path: '/' }]);
    await page.goto('/dashboard/landlord');
    await expect(page.locator('body')).toContainText(/Access Restricted|Forbidden/i);
  });

  test('Landlord blocked from Admin console (/admin)', async ({ page, context }) => {
    await context.addCookies([{ name: 'sb-access-token', value: process.env.TEST_LANDLORD_JWT!, domain: 'localhost', path: '/' }]);
    await page.goto('/admin');
    await expect(page.locator('body')).toContainText(/Access Restricted|Forbidden/i);
  });
});
```

```
});
```

5. QUALITY SIGN-OFF & DOD CHECKLIST

Sign-Off Confirmation: All 30 test cases across 6 test suites have been formally specified, mapped to PostgreSQL RLS policies, and validated against the Capstone requirements for Metro Cebu rental operations.
